Digital Literacy Project Report

Course Code: CSE0001
Course Title: Digital Literacy
Name: Falit Nautiyal
Registration Number: 25BAI10615
Branch: B.Tech CSE(AIML)
University: VIT Bhopal University
Date: 23/03/2026

Introduction

The Digital Literacy Project was created to assist learners in comprehending the value of digital literacy in their academic, professional, and personal lives. In the current world, learners are not only expected to utilize digital technology but also to comprehend digital systems, communicate professionally online, and ensure online safety.

The Digital Literacy Project comprised five tasks that included developing a digital literacy infographic, developing a digital portfolio, exploring coding and collaboration platforms, writing professional emails, and exploring cybercrime awareness. Through this project, I was able to learn to develop a professional online presence, utilize digital technology appropriately, communicate professionally via emails, and develop an understanding of online safety and cybercrime prevention.

Task 1 – Digital Literacy Awareness Infographic

For Task 1, I designed an infographic using Canva software that focused on Digital Literacy Awareness. The infographic included various aspects of digital literacy such as the importance of digital literacy, digital tools that can be beneficial for students, safe surfing of the internet, maintaining a professional online profile, and email etiquette. The infographic's main aim is to assist students in understanding the significance of digital literacy in their college life and future professions.
The infographic explained that digital literacy is not only limited to using social media sites or surfing the internet, but it is also important to utilize digital technology for the right reasons, maintain professional communication skills, protect personal information online, and create a personal online portfolio. Additionally, there are various digital tools that can be beneficial for students, such as Google Docs, Canva, GitHub, LinkedIn, and coding websites.
While designing the infographic for Task 1, the most interesting part of the task was to design the infographic's layout. The most challenging part of the task was to decide the

most important aspects of digital literacy that would fit within one infographic without making it look cluttered..

Task 2 – Student Digital Portfolio

In Task 2, I have developed my student digital portfolio by creating professional accounts on various platforms such as GitHub, LinkedIn, and coding platforms. These platforms are important to students as they help create a professional online identity that can be accessed by recruiters/internship coordinators.
I will use GitHub to upload my projects, code, and other programming-related work. GitHub will be my programmer's portfolio. I will use LinkedIn to create my professional profile, network with other programmers/internship recruiters, and apply for internships/jobs. I will use the coding platforms to practice my programming skills by solving problems on platforms such as HackerRank or CodeChef.
In the next four years, I will regularly upload my projects on GitHub, regularly update my LinkedIn profile with my accomplishments/internships, and regularly practice my coding skills on the coding platforms..

Task 3 – Coding & Collaboration Platforms

In Task 3, I learned about coding practice platforms and collaboration tools. I created an account on a coding platform and completed a coding challenge. This helped me understand how coding platforms operate and how they help students practice coding.

I also created a Google Form titled "Digital Literacy Awareness Quiz" containing five questions on digital literacy, online safety, and digital tools. This helped me understand how collaboration and data collection tools operate.

These platforms will help me academically because coding platforms help in developing logical thinking and programming skills. Google Forms and Google Sheets help in surveys, data collection, group projects, and research work. Learning these platforms is very beneficial in college.

Task 4 – Professional Email & Etiquette

In Task 4, I had written two professional emails to a professor asking for an extension on an assignment and to an internship coordinator expressing my interest for an internship opportunity. When writing these emails, I have come to realize that subject headings, greetings, appropriate language usage, and sign-offs are important.

I have come up with a list that reads “Social Media Do’s and Don’ts” that is important to remind college students about. This list will include Do’s like having a professional profile, not disclosing any personal information, not sending any offensive emails, etc.

If a student sends an email to a professor without a subject heading, greeting, or appropriate language usage, the professor will not take the email seriously because that is not an appropriate way to communicate with a professor.

Task 5 – Cybercrime Awareness

In task 5, I have learned about cybercrime. Cybercrime involves payment fraud on the internet and phishing. From this task, I have learned how cybercriminals trick people by sending people fake links, fake phone calls, OTP fraud, and fake payment. Young people, especially students, are victims of cybercriminals.

The most surprising thing to me is that people are victims of cybercriminals by losing their money by clicking on a fake link or sending an OTP. Most cases of cybercrime are done by people who are in haste or are impulsive.

I have learned that I have to inculcate a habit within myself that I will not share my OTP, bank details, or any other details with anyone. Apart from this, I have to make people aware of how to prevent cybercrime and how to report it to the authorities. This can be done by contacting the Cyber Crime Portal and Helpline 1930.

Conclusion

This Digital Literacy Project has helped me realize that digital literacy does not only mean using technology but using it responsibly, safely, and professionally. This Digital Literacy Project has helped me learn how to create a digital portfolio, use coding tools, collaborate, communicate professionally through emails, and stay safe from cybercrime.

This digital literacy project has helped me create my digital presence, which will be beneficial for my academic, internship, placement, as well as professional life. This digital literacy project has helped me become more digitally literate, a better communicator, and a more knowledgeable individual about digital safety.
